Specifically, multimodal systems can offer a flexible, efficient and usable environment allowing users to interact through input modalities, such as speech, handwriting, hand gesture and gaze, and to receive information by the system through output modalities, such as speech synthesis, smart graphics and other modalities, opportunely combined.

Multimodal interaction

In summary, a well-designed multimodal system that fuses two or more information sources can be an effective means of reducing recognition uncertainty. Performance advantages have been demonstrated for different modality combinations (speech and pen, speech and lip movements), as well as for varied tasks and different environments.

Multimodal Transport System. A multimodal transport system integrates different geographical scales from the global to the local. With the development of new modal and intermodal infrastructure, regions have growing accessibility to the global market. The above figure represents a corridor within a multimodal transportation system composed of a set of gateways and hubs (A, B, and C) where regional and local transportation networks converge.

A Multi-model database is a database that can store, index and query data in more than one model. For some time, databases have primarily supported only one model, such as: relational database, document-oriented database, graph database or triplestore. A database that combines many of these is multi-model.
