Unfortunately this is a common issue for this model of Cadillac. The popular 2000 and 2002 Cadillac DeVilles are prime casualties, with the engine tending to overheat due to a leaking head gasket. Alternatively, a water pump leak could be preventing your coolant circulating freely through your engine. Either way, if not identified and fixed quickly this overheating may cause the cylinder head to expand resulting in damage to the engine block.

...

Per Cadillac, the air trapped in the deactivated cylinders acted as a cushion, helping to smooth engine operation. Efficiency hounds who worry about things like pumping losses likely found this situation wince inducing—and likely deduced that GM engineers simply failed to find a way to crank the exhaust valves open a bit to vent compressed air from the inactive cylinders.
