human-kinetics - Dynamic Human Anatomy, Second Edition
The dynamic human model includes a skeleton model in which muscles, bones, and joints provide the principle mechanics for movement, all coordinated by the nervous system. A flexible outer skin is securable over the skeleton model and the muscles, whereby a portion of the flexible outer skin may be removed for exposing the skeleton model and the muscles. When manipulated the human body's dermatome map and cutaneous innervations are shown.

Dynamic Human Model - DynAtomy Labs

The dynamic human model includes a skeleton model having a plurality of bone elements with the appearance of the human bones coupled together by articulating joints. The joints between bones allow movement. Movement is powered by skeletal muscles, which are attached to the skeleton at various sites on bones.
