Thank you for reading electromagnetic induction explore learning answers. Maybe you have knowledge that, people have search numerous times for their favorite readings like this electromagnetic induction explore learning answers, but end up in malicious downloads.

Rather than reading a good book with a cup of coffee in the afternoon, instead they are facing with some harmful virus inside their desktop computer.

electromagnetic induction explore learning answers is available in our book collection an online access to it is set as public so you can get it instantly.

Our digital library saves in multiple countries, allowing you to get the most less

Electromagnetic Induction Explore how a changing magnetic field can induce an electric current. A magnet can be moved up or down at a constant velocity below a loop of wire, or the loop of wire may be dragged in any direction or rotated. The magnetic and electric fields can be displayed, as well as the magnetic flux and the current in the wire.

A. A magnet is moving toward a wire loop.

B. A wire loop is moving away from a

magnet. C. A wire loop is rotated near a

magnet. D. All of the above All of the above

Explanation: Electric currents are produced in wire loops when there is any change in the magnetic ϕ ux passing through the wire loop.

As per Faraday's laws of electromagnetic induction, an e.m.f. is induced in a conductor whenever it (a) lies perpendicular to the magnetic flux (b) lies in a magnetic field (c) cuts magnetic flux (d) moves parallel to the direction of the magnetic field.

Ans: c . 3. Which of the following circuit element stores energy in the electromagnetic field ?
