That's done through the oil breather tube, a section of plastic or metal tubing that comes out of the engine and vents through to the outside. Although this benign little hose doesn't require much maintenance, it does have one major drawback—a blocked breather tube can pressurize the engine and cause seals to fail.

The Norton twin cylinder engine creates a serious amount of pressure in the crankcase as the motor spins. Over the years the factory attempted several methods to reduce this pressure – from a timed breather off the end of the cam on earlier motors, to a crude straight pipe from the timing chest on later 850s.

A breather pipe allows an internal combustion engine to vent crankcase pressure out of the engine. It is actually a vent pipe. Its also called crank case ventilation pipe By venting pressure out of the crankcase, an engine's piston rings are allowed to seal tighter against the cylinder walls.

**What is the function of a breather pipe in engines? - Quora**

In order for the PCV system to sweep fumes out of the crankcase, the crankcase must have a source of fresh air. The source of this fresh air is the "crankcase breather", which is usually ducted from the engine's intake manifold. The breather is usually provided with baffles and filters to prevent oil mist and vapour from fouling the air filter.

DIY - 1.8l Lower PCV Hose install You are all familiar with it. It's the second crappiest hose setup on the 1.8's, coming in just behind the upper Y hose. Eurojet just came out with an "excellent" replacement that is well worth the time and effort to replace. I hate doing things twice (except my 2nd timing chain is coming on strong) so do this once and don't worry about it again.
