Examines how the European Union has handled environmental protection issues. Significant changes in how the world approaches global environmental problems have occurred since the late 1970s. Countries have become increasingly aware of the “ borderless ” nature of environmental issues, i.e., that production and consumption in one country can spill over to affect another country ’ s environment. Protecting Our Environment considers the successes that have been achieved in the European Union (EU), as well as issues the Union still faces regarding the protection of the environment in the future. Authors Janet R. Hunter and Zachary A. Smith identify the factors that have allowed the EU to form a successful environmental regime, including the development of the environmental management approach and the principles upon which it is based. They examine in detail the challenges that have been encountered in the implementation of environmental programs, and the solutions that have been developed to address those challenges. Also considered is how economic development and environmental protection have been reconciled within the EU. By analyzing the successful example of the EU, Protecting Our Environment provides a model for a contemporary approach to global environmental problems. Janet R. Hunter is Chair of Administrative Information Services at Northland Pioneer College. Zachary A. Smith is

Online Library Environmental Solutions In Europe Need To

Regents Professor of Political Science at Northern Arizona University. He is the author or editor of many books, including *The Environmental Policy Paradox*, Fourth Edition.

This book aims to take stock of the state of environmental degradation in Europe from theoretical and empirical point of views. It focuses on international organizations and institutions in Europe that deal with ecological problems and integrates case studies on regional environmental cooperation.

Conventions, Treaties and other Responses to Global Issues is a component of Encyclopedia of Institutional and Infrastructural Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. This theme Conventions, Treaties and other Responses to Global Issues deals with the issue of international resource regimes. These are formal responses by states to the threats posed by trans-boundary pollution or the distribution of resources. In the past thirty years the number of international environmental agreements has steadily risen to reach record numbers and these agreements have secured a firm place in the hierarchy of international affairs. There is a loose assumption that this is a good thing and that this rise has resulted in a commensurable improvement in environmental protection and resource allocation. But is this

Online Library Environmental Solutions In Europe Need To

actually the case? In fact, is there a positive correlation at all? Or are there negative correlations? What are the connections between environmental diplomacy and environmental protection and how can environmental protection be achieved? These are just a few of the questions that will be addressed in this theme, whilst at the same time giving an overview of the most important international resource regimes and the most influential international organizations having an environmental impact. The theme takes the following shape: the first section introduces issues of international environmental law and its history, showing that international law can take many different forms. Here we explain what policy tools states have in drafting responses to global environmental issues. The second section deals with the most prominent international environmental agreements and gives a state of the art overview of existing regimes. The third and last section of this theme introduces the key actors in the international arena besides states, such as international organizations and civil society actors, such as pressure groups. These two volumes are aimed at the following five major target audiences: University and College students Educators, Professional practitioners, Research personnel and Policy analysts, managers, and decision makers and NGOs.

This volume contains papers presented in a workshop of international experts in September 2008 in Berlin. The experts discussed how environmental consequences of EU legislation can be incorporated in a more effective way. In other words, this contribution focuses on the question of which measures can strengthen the consideration of environmental effects in the EU impact assessment procedure and in the subsequent legislative decision-making process. This allows drawing conclusions for the impact assessment process in Germany. This volume

Online Library Environmental Solutions In Europe Need To

begins with an introductory paper (Bizer/Lechner/Führ) which served as the basis for discussion in our workshop. The questions raised in this paper are addressed by the authors of the subsequent chapters. Stephen White (DG Environment, EU-Commission) discusses the impact assessment from an internal perspective within the Commission. Pendo Maro (European Environmental Bureau) reviews the impact assessment practice from the perspective of an environmental NGO. Martin Schmidt et al. discuss the potential for more formalism to strengthen environmental issues within impact assessments and favour a checklist.

This student-friendly textbook offers a comprehensive introduction to globalization studies and the European Union within a multipolar world. It provides its readers with critical analysis of the key concepts of multilateral global and regional governance and Europe's role in the world; and this in an accessible and intelligible fashion. This volume collects contributions by eminent scholars from world class universities from five different continents. As such, this unique exercise in transnational multi-disciplinary cooperation, provides extensive coverage of the main issues pertaining to multilateral cooperation - notably its history, troubles, legitimacy challenges and efficiency questions - from a variety of national perspectives. The book covers the major issues confronting students of European and global studies, amongst which: pressing security challenges, new forms of institutionalized cooperation, shifting international trade flows, the notion of responsibility to protect, social imbalances and environmental emergencies, the need for less contingent forms of legitimacy for global regulation, as well as global public opinion and transnational civil society networks.

Online Library Environmental Solutions In Europe Need To

Each chapter includes a summary of its salient points; methodological indications; illuminating illustrations; and a suggested list for further reading. This textbook strives to help students develop a better and more secure grasp of the innovative balance between interdisciplinary openness and disciplinary rigor when engaging with global governance studies, comparative regionalism, normative studies, international political economy or international law.

Based on empirical studies of European energy and environmental policies, this book suggests that, in combination, these two policy fields form a consensus in the EU which might also become the basis for a new European ideology, namely European ‘sustainability’. It asks why an environmental conscience has grown since the late 1960s in the industrialised world and shows that whilst there is undeniable environmental degradation during this time, and that a European environmental conscience has mainly developed through successive steps of European integration in energy policy. In this connection between energy and the environmental we find one driver for European integration and indeed European identity. If sustainability should become a European ideology, it will substantially influence the way future Europeans will live. This book will be of key interest to scholars and students of European Studies, International Relations, Political Science, History, Economics, Sustainability Studies, Environmental and Energy Policies in Europe.

The Entec Directory of Environmental Technology, European Edition is the only comprehensive reference to cover producers and users of goods and services in these areas of

Online Library Environmental Solutions In Europe Need To

environmental concern: Water Air Solid waste Hazardous waste Noise vibration Energy Information, including up-to-date names and addresses, is featured for more than 20,000 companies from the 20 countries of Western Europe. Thousands of products, processes, and services have been categorized under 865 specific products and service groups. Never before has such a massive reference to European environmental goods and services been compiled. The book will be invaluable to anyone in government, industry, science and education, or the professional arena who would like to utilize European environmental technology.

This book explores the development of climate change discourses in Russia. It contributes to the study of climate change as a cultural idea by developing the extensive Anglophone literature on environmental science, politics and policy pertaining to climate change in the West to consider how Russian discourses of climate change have developed. Drawing on contributors specialising in numerous periods, regions, disciplines and topics of study, the central thread of this book is the shared attempt to understand how environmental issues, particularly climate change, have been understood, investigated and conceptualised in Soviet and post-Soviet Russia. The chapters aim to complement work on the history of the discursive political construction of climate change in the West by examining a highly contrasting (but intimately related) cultural context. Russia remains one of the world ' s largest greenhouse gas emitters with one of the most carbon-intensive economies. As the world begins to suffer the extreme consequences of anthropogenic climate change, finding adequate solutions to global environmental problems necessitates the participation of all countries. Russia is a central actor in this global process and it, therefore, becomes increasingly important to

Online Library Environmental Solutions In Europe Need To

understand climate change discourse in this region. Insights gained in this area may also be illuminating for examining environmental discourses in other resource rich regions of the world with alternative economic and political experiences to that of the West (e.g. China, Middle East). This book will be of great interest to students and scholars of Russian environmental policy and politics, climate change discourses, environmental communication and environment and sustainability in general.
