Excessive noise levels are generally acknowledged to have adverse effects on our environment. Studies indicate that excessive noise levels can cause fatigue in exposed individuals, lower efficiency and productivity, impaired speech communication, and hearing loss. Excessive noise is almost everywhere today - in the office, in schools, hospitals and other institutional facilities, in all classes of public buildings, and in our factories. INDUSTRIAL NOISE High noise levels in factories can make speech communication in the plant difficult and at times impossible. Foremen are often unable to hear warning shouts from co-workers. The problem of hearing loss due to excessive noise exposure is of particular concern to industry, and to the federal government. In the early 1970s, the United States Congress passed the Occupational Safety and Health Act (OSHA) which sets criteria for health hazards and established limits for noise exposure of industrial workers. The OSHA Noise Standard was amended in 1982 to require audiometric testing of all employees exposed to noise levels of 85 dB or above for eight hours. A NOISE IN COMMERCIAL AND INSTITUTIONAL BUILDINGS While noise levels in offices, stores, schools, and other commercial and institutional buildings seldom reach those encountered in many industrial environments, they often reach levels which are distracting to the occupants of such buildings. Impairment of speech communication among workers, or inversely the lack of speech privacy, are both deterrents to efficiency and productivity and are detrimental to the occupants' comfort and sense of well-being.

The thoroughly updated Sixth Edition of this popular Spiral® Manual is a reliable, accessible guide for all health care professionals who diagnose and treat musculoskeletal injuries and diseases. In a user-friendly outline format, the book presents specific proven treatment regimens for the full range of acute and chronic orthopaedic disorders. More than 200 illustrations complement the text. This edition's chapters on non-acute disorders include guidelines for primary care physicians on evaluating patients' complaints, planning a cost-effective workup, utilizing physical and occupational therapy, and determining whether orthopaedic subspecialist care is needed. A new chapter covers aspiration and injection of upper and lower extremities.
