Engineers' dreams and fossil energy replacement schemes can come true. Man has been tapping the energy of the sea to provide power for his industries for centuries. Tidal energy combined with that of waves and marine winds rank among those most successfully put the work. Large scale plants are capital intensive but smaller ones, particularly built in China, have proven profitable. Since the initiation of the St Malo project in France, similar projects have gone into active service where methods have been devised to cut down on costs, new types of turbines developed and cost competitiveness considerably improved. Tidal power has enormous potential. The book reviews recent progress in extracting power from the ocean, surveys the history of tidal power harnessing and updates a prior publication by the author.

Dive into the compelling mystical world of the Healer series by New York Times bestselling author Maria V. Snyder. She's fought death and won. But how can she fight her fears? Avry knows hardship and trouble. She fought the plague and survived. She took on King Tohon and defeated him. But now her heart-mate, Kerrick, is missing, and Avry fears he's gone forever. But there's a more immediate threat. The Skeleton King plots to claim the Fifteen Realms for his own. With armies in disarray and the dead not staying down, Avry's healing powers are needed now more than ever. Torn between love and loyalty, Avry must choose her path carefully. For the future of her world depends on her decision! Originally published in 2014

Her secret cloaks her in isolation and loneliness. His secret traps him in a life that is not his own. Darbury, England, 1819 Cecily Faire carries the shame of her past wherever she treads, knowing one slip of the tongue could expose her disgrace. But soon after becoming a lady's companion at Willowgrove Hall, Cecily finds herself face-to-face with a man well-acquainted with the past she's desperately hidden for years, Nathaniel Stanton has a secret of his own/one that has haunted him for years and tied him to his father's position as steward of Willowgrove Hall. To protect his family, Nathaniel dares not breathe a word of the truth. But as long as the shadow looms over him, he'll never be free to find his own way in the world. He'll never be free to fall in love. When the secrets swirling within Willowgrove Hall come to light, Cecily and Nathaniel must confront a painful choice: Will they continue running from the past . . . or will they stand together and fight for a future without the suffocating weight of secrets long kept?

Gió Andrade is rich, powerful and sexy. He is a man who thinks he has everything, until he meets Julia.

Storytelling in World Cinemas, Vol. 2: Contexts addresses the questions of what and why particular stories are told in films around the world, both in terms of the forms of storytelling used, and of the political, religious, historical, and social contexts informing cinematic storytelling. Drawing on films from all five continents, the book approaches storytelling from a cultural/historical multidisciplinary perspective, focusing on the influence of cultural politics, postcolonialism, women's social and cultural positions, and religious contexts on film stories. Like its sister volume, *Storytelling in World Cinemas, Vol. 1: Forms*, this book is an innovative addition to the academic study of world cinemas.

This timely volume provides a comprehensive review of current technology for all ocean energies. It opens with an analysis of ocean thermal energy conversion (OTEC), with and without the use of an intermediate fluid. The historical and economic background is reviewed, and the geographical areas in which this energy could be utilized are pinpointed. The production of hydrogen as a side product, and environmental consequences of OTEC plants are looked at. The competitiveness of OTEC with conventional sources of energy is analysed. Optimisation, current research and development potential are also examined. Separate chapters provide a detailed examination of other ocean energy sources. The possible harnessing of solar ponds, ocean currents, and power derived from salinity differences is considered. There is a fascinating study of marine winds, and the question of using the ocean tides as a source of energy is examined, focussing on a number of tidal power plant projects, including data gathered from China, Australia, Great Britain, Korea and the USSR. Wave energy extraction has excited recent interest and activity, with a number of experimental pilot plants being built in northern Europe. This topic is discussed at length in view of its greater chance of implementation. Finally, geothermal and biomass energy are considered, and an assessment of their future is given. Each chapter contains bibliographic references. The author has also distinguished between energy schemes which might be valuable in less-industrialized regions of the world, but uneconomical in the developed countries. A large number of illustrations support the text. Every effort has been made to ensure that the book is readable and accessible for the specialist as well as the non-expert. It will be of particular interest to energy economists, engineers, geologists and oceanographers, and to environmentalists and environmental engineers.

An introduction to the calculus, with an excellent balance between theory and technique. Integration is treated before differentiation – this is a departure from most modern texts, but it is historically correct, and it is the best way to establish the true connection between the integral and the derivative. Proofs of all the important theorems are given, generally preceded by geometric or intuitive discussion. This Second Edition introduces the mean-value theorems and their applications earlier in the text, incorporates a treatment of linear algebra, and contains many new and easier exercises. As in the first edition, an interesting historical introduction precedes each important new concept.

Cultivating Film-makers offers a timely consideration of both the history and the current challenges facing practice-based film education. Film schools have been about the cultivation of the film-maker as a cultural activist an artist or even as an intellectual; the fostering of creativity and innovation relevant to particular material, technological and industrial circumstances; and the promotion of the broader social importance of film and television in relation to critical and imaginative engagement, communication and education, representation and self-determination. This book offers a timely consideration of both the history and the current challenges facing practice-based film education, providing both history and provocations for the future of film schools. Written by two long-standing educators in cinema, this is an indispensable read for both film teachers and students alike.
