After thousands of years, so many of us still search for the answer to the mystery of Atlantis. From time to time, archaeologists and historians locate evidence. There have been many locations proposed for the location of Atlantis. Ever since the first recorded history of Atlantis, written by the Greek philosopher Plato over 2,300 years ago, debate has raged as to whether or not Atlantis ever really existed. The existence of Atlantis is supported by the fact that it is described in great details by Plato. In additions, various conditions, events and goods unknown to Plato are also described in detailed and lengthy words. The recent knowledge of late glacial and postglacial sea level rise and land subsidence that occurred almost precisely at the time described by Plato also becomes strong evidence to the truth of the story. Plato describes the Atlantis from point of views of geography, climate, plain layout, city layout, river and channel hydraulics, produces, social structure, customs, mythology and its destruction in details including their dimensions and orientations. These become the subjects of the author to hypothesize that the lost city of Atlantis is in Java Sea. The works include over 5-year research and analysis of textbooks, papers, internet sites and digital data collected by the author as well as some site observations. These resulted in accurate evidence to the hypothesis that the story fits the location in question. The book discusses the existence of Atlantis in specific details that have never been written by others.

Among the many contentious matters thrown up by the relentless march of economic globalization, those forms of knowledge variously known as 'indigenous' or 'traditional' remain seriously threatened, despite numerous transnational initiatives and highly publicized debate. It is not proving easy to bring these holistic worldviews into accordance with the technical terms and classifications of intellectual property law. The contributions in this volume contrast efforts to find solutions and workable models at the international and regional level with experiences on the ground. Legal policies related to 'indigenous knowledge' in settler societies such as Australia and New Zealand are compared with those in densely populated neighbouring countries in Asia, where traditional knowledge is often regarded as national heritage. While many of the chapters are written by lawyers using an interdisciplinary approach, other chapters introduce the reader to perspectives from disciplines such as legal sociology and anthropology on controversial issues such as the understandings of 'art,' 'culture,' 'tradition,' 'customary law' and the opportunities for traditional cultural knowledge and traditional cultural expressions in an Internet environment. Experienced observers of the international debate and regional experts discuss international model laws as well as legislation at regional and national level and the role of customary law. Topics covered include the following and much more: the concept of 'farmers' rights'; biodiscovery and bioprospecting; traditional knowledge as a commodity; encounters between different legalities; geographical indications; registration requirements; sanctions, remedies, and dispute resolution mechanisms; the ongoing fragmentation and loss of traditional knowledge; and systems of data collection.
