These types of macros are generally referred to as user interface macros. Access 2010 was the first version to introduce the

File Type PDF Microsoft Access 2010 Vba Macro

concept of data macros. A data macro allows you to automate tasks and add functionality directly to your tables. Data macros and their actions are attached to specific table events such as when you add a new record to a table.

Introduction to macros - Access - support.microsoft.com

When a database starts, Access runs the AutoExec macro before it runs any other macros or VBA code. Create an AutoExec macro. If you have already created a macro that contains the actions that you want to occur when the database starts, just rename the macro to AutoExec, and it will run the next time that you open the database. Otherwise, follow these steps to create a macro: On the Create tab, in the Other group, click Macro.

Create a macro that runs when you open a

File Type PDF Microsoft Access 2010 Vba Macro

database - Access

If you name a macro Autoexec, Microsoft Access automatically runs it when your database opens. You can also open Microsoft Access from a command line and specify a macro name after the /x switch to run it when it opens. For instance, you can run the macro named MyMacro like this: C:\Program Files (x86)\Microsoft Office\root\Office16\MSACCESS.EXE /x MyMacro.

Beginning in the Access 2010 release, Access contains many new macro actions that enable you to build more powerful macros than you can build by using earlier versions of Access. For example, you can now create and use global temporary variables by using macro actions, and you can handle errors more gracefully by using new error-handling macro actions.

Introduction to Access programming - Access

Step 1 – Click on File and select “ Access Options ” . Step 2 – On the left side of the window, select “ Trust Center ” Step 3 – With the Access Options window open, Select “ Trust Center Settings ” button. Step 4 – In the Trust Center window, click on Macro Settings on the left side.
