Ideas about sustainability have changed considerably since the Climate Change Convention was agreed in Rio de Janeiro 20 years ago. This volume re-examines the concept of sustainability and considers what issues are now considered pertinent around the world.

The Urban Climate Change Research Network's Second Assessment Report on Climate Change in Cities (ARC3.2) is the second in a series of global, science-based reports to examine climate risk, adaptation, and mitigation efforts in cities. The book explicitly seeks to explore the implications of changing climatic conditions on critical urban physical and social infrastructure sectors and intersectoral concerns. The primary purpose of ARC3.2 is to inform the development and implementation of effective urban climate change policies, leveraging ongoing and planned investments for populations in cities of developing, emerging, and developed countries. This volume, like its predecessor, will be invaluable for a range of audiences involved with climate change and cities: mayors, city officials and policymakers; urban planners; policymakers charged with developing climate change mitigation and adaptation programs; and a broad spectrum of researchers and advanced students in the environmental sciences.

Introducing... Essentials of Investments, 9th Global Edition, by Zvi Bodie, Alex Kane and Alan J. Marcus. We are pleased to present this Global Edition, which has been developed specifically to meet the needs of international Investment students. A market leader in the field, this text emphasizes asset allocation while presenting the practical applications of investment theory without unnecessary mathematical detail. The ninth edition includes new coverage on the roots and fallout from the recent financial crisis and provides increased content on the changes in market structure and trading technology. Enhancements to this new Global Edition include: - New 'On the market front' boxes highlight important investment concepts in real world situations across the globe, to promote student thinking without taking a full case study approach. Topics include short-selling in Europe & Asia, credit default swaps and the debt crisis in Greece and include examples from Commerzbank, JP Morgan, Facebook, Coca-Cola, Santander, The European Energy Exchange, plus many more! - Revised worked examples illustrate problems using both real and fictional scenarios from across the world to help students develop their problem solving skills. Regional examples include Hutchinson Whampoa (Asia), The Emirates Group (The Middle East) and KLM Royal Dutch Airlines (The Netherlands). - Revised end-of chapter material includes brand new global questions and global internet exercises that feature currencies, companies and scenarios from Europe, Middle East, Africa and Asia to increase engagement for international students. - Global Edition of Connect Plus Finance, McGraw-Hill's web-based assignment and assessment platform with eBook access, helps students learn faster, study more efficiently, and retain more knowledge. This Global Edition has been adapted to meet the needs of courses outside of the United States and does not align with the instructor and student resources available with the US edition.

The international community has long grappled with the issue of safeguarding the environment and encouraging sustainable development, often with little result. The 1992 Rio Declaration on Environment and Development was an emphatic attempt to address this issue, setting down 27 key principles for the international community to follow. These principles define the rights of people to sustainable development, and the responsibilities of states to safeguard the common environment. The Rio Declaration established that long term economic progress required a connection to environmental protection. It was designed as an authoritative and comprehensive statement of the principles of sustainable development law, an instrument to take stock of the past international and domestic practice, a guide for the design of new multilateral environmental regimes, and as a reference for litigation. This commentary provides an authoritative and comprehensive overview of the principles of the Declaration, written by over thirty inter-disciplinary contributors, including both leading practitioners and academics. Each principle is analysed in light of its origins and rationale. The book investigates each principle's travaux préparatoires setting out the main points of controversy and the position of different countries or groups. It analyses the scope and dimensions of each principle, providing an in-depth understanding of its legal effects, including whether it can be relied before a domestic or international court. It also assesses the impact of the principles on subsequent soft law and treaty development, as well as domestic and international jurisprudence. The authors demonstrate the ways in which the principles interact with each other, and finally provide a detailed analysis of the shortcomings and future potential of each principle. This book will be of vital importance to practitioners, scholars, and students of international environmental law and sustainable development.

The Routledge Handbook of Events explores and critically evaluates the debates and controversies associated with the rapidly expanding domain of Event Studies. It brings together leading specialists from a range of disciplinary backgrounds, to provide a state-of-the-art review on the evolution of the subject. The first edition was a landmark study which examined how event research had evolved and developed from a range of different social science subject areas and disciplines. The Handbook was the first critique of the extent to which the subject had developed into a major area of social science inquiry. This second edition has been fully updated to reflect crucial developments in the field and includes brand new sections on ever-important aspects of Event Studies such as: anthropology, hospitality, seasonality, knowledge management, accessibility, diversity and human rights, as well as new studies on 'the eventful city' and the benefits of events in older life. The book is divided into four inter-related sections. Section 1 introduces and evaluates the concept of events. Section 2 critically reviews the relationship between events and other disciplines such as the contribution of economics, psychology and geography to the critical discourse of Event Studies. Section 3 focuses on the business, operational and strategic management of events, while the final section crucially focuses on critical events as a new paradigm within the burgeoning literature on Events. It offers the reader a comprehensive and critical synthesis of this field, conveying the latest thinking associated with events research, edited by two of the leading scholars in the field. The text will provide an invaluable resource for all those with an interest in Events Studies, encouraging dialogue that will span across disciplinary boundaries and other areas of study. It is an essential guide for anyone interested in events research.

Lonely Planet Rio de Janeiro is your passport to all the most relevant and up-to-date advice on what to see, what to skip, and what hidden discoveries await you. Stroll barefoot on Ipanema beach, take in the view from Pao de Acucar (Sugarloaf), or shake your hips at an old-fashioned samba club.

This comprehensive handbook provides a global overview of ocean resources and management by focusing on critical issues relating to human development and the marine environment, their interrelationships as expressed through the uses of the sea as a resource, and the regional expression of these themes. The underlying approach is geographical, with prominence given to the biosphere, political arrangements and regional patterns - all considered to be especially crucial to the human understanding required for the use and management of the world's oceans. Part one addresses key themes in our knowledge of relationships between people and the sea on a global scale, including economic and political issues, and understanding and managing marine environments. Part two provides a systematic review of the uses of the sea, grouped into food, ocean space, materials and energy, and the sea as an environmental resource. Part three on the geography of the sea considers management strategies especially related to the state system, and regional management developments in both core economic regions and the developing periphery. Chapter 23 of this book is freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 3.0 license.

Twenty years after the United Nations Conference on Environment and Development, "The Earth Summit", the Rio+20 conference in 2012 brought life back to sustainable development by putting it at the centre of a new global development

partnership, one in which sustainable development is the basis for eradicating poverty, upholding human development and transforming economies. Written by practitioners and participants involved in the multilateral process of negotiations, this book presents a unique insider analysis of not only what happened and why, but also where the outcomes might impact in the future, particularly in the UN development agenda beyond 2015. The book throws light on the changing nature of multilateralism and questions frequent assumptions on how policy is defined within the UN. It shows that Rio+20 was more than an international meeting; it represented a culminating point of decades of successes and failures and a watershed moment for seminal concepts, ideas and partnerships including the Green Economy, zero tolerance on land degradation, the introduction of Sustainable Development Goals, the creation of national measurements of consumption, production and well-being that are intended to go beyond GDP, the introduction of national green accounting and the commitment of billions of dollars for sustainable development partnerships, including Sustainable Energy for All. The authors conclude by mapping out a new agenda for development in 2015, when the current Millennium Development Goals framework is due to expire. An agenda that will restore faith in the UN and inspire a global response to the demographic, economic and environmental challenges that will define our future in the decades to come.

The Palgrave Handbook of International Communication and Sustainable Development is a major resource for stakeholders interested in understanding the role of communication in achieving the UN'S Sustainable Development Goals. Bringing together theoretical and applied contributions from scholars in Europe, Africa, the Middle East, Asia and North America, the handbook argues that communication is a key factor in achieving the global goals and suggests a review of the SDGs to consider its importance. Reflecting on the impact of COVID-19, it highlights the need for effective communication infrastructure and critically assesses the 2030 agenda and timeline. Including individual SDG and country case studies as well as integrated analysis, the chapters seek to enrich understanding of communication for development and propose crucial policy interventions. It is critical reading for researchers as well as policy makers and NGOs.

This three-volume work presents the proceedings from the 19th International Ship and Offshore Structures Congress held in Cascais, Portugal on 7th to 10th September 2015. The International Ship and Offshore Structures Congress (ISSC) is a forum for the exchange of information by experts undertaking and applying marine structural research. The aim of
