Who knew today could be the last. An unknown object impacts in a remote Moroccan town. Nothing prepared us for what happened next. As cities fall, continents shift and the human race struggles to exist, Vivienne Wright must fight her demons as well as the people charged with the survival of humankind.

With no defence, and no way to detect where it may impact next, their only hope is to hide and wait out the mysterious object. Will Vivienne ' s belief in a mute young woman salvage what ' s left of humanity? Do we even deserve to survive? “ I am responsible for ending our world. Nothing can save us. When the end comes, believe in

"While the energy sector is a primary target of efforts to arrest and reverse the growth of greenhouse gas emissions and lower the carbon footprint of development, it is also expected to be increasingly affected by unavoidable climate consequences from the damage already induced in the biosphere. Energy services and resources, as well as

seasonal demand, will be increasingly affected by changing trends, increasing variability, greater extremes and large inter-annual variations in climate parameters in some regions. All evidence suggests that adaptation is not an optional add-on but an essential reckoning on par with other business risks. Existing energy infrastructure,

Download Ebook Power Substation Case Study

new infrastructure and future planning need to consider emerging climate conditions and impacts on design, construction, operation, and maintenance. Integrated risk-based planning processes will be critical to address the climate change impacts and harmonize actions within and across sectors. Also, awareness, knowledge, and capacity impede

on energy service provision and demand. It discusses emerging practices and tools for managing these impacts and integrating climate considerations into planning processes and operational practices in an environment of uncertainty. It focuses on energy sector adaptation, rather than mitigation which is not discussed in this
