~~In psychology the research falls into two traditions, hedonistic and eudaimonic. The first views happiness as the opposite of suffering and misery. The hedonist's purpose of life is to find happiness (happiness as a destination). For the eudaimonic, the focus is on living life in a full and satisfying way (happiness as a journey).~~

The aim of this paper is to explore the reliability and utilization of the diagnostic marker Lipoprotein-Associated Phospholipase A2 (LpPLA2) for humans with suspected cardiovascular or cerebral vascular conditions or predispositions.

This brief, practical guide offers a clear and comprehensive strategy for conceptualizing, approaching, and executing the task of writing a research paper in the humanities and social sciences. In addition, it provides: a critical and process-oriented approach to the tasks of topic selection, formulation of the research question, thesis development, and argumentation. judiciously selected examples drawn from a broad range of disciplines. concise treatment of the aims, methods, and conventions of scholarly research, including the opportunities and pitfalls of Internet use. a wealth of conceptual and organizational tools, and more.

The International Student's Guide to Writing a Research Paper is a reference text for undergraduate students and those in ESL or bridge courses who are writing a research paper for the first time. This book is partly an update of Writing a Research Paper (by Lionel Menasche, 1998) and partly a companion to The ESL Writer's Handbook. Like WRP, teachers can move through the writing process in stages to end up with a thorough and coherent research paper. Like a handbook, the text is less dense, with explanations provided in sections for easy comprehension and practice exercises included.

Textbooks are designed to teach, explain and make complex information easily understood and assimilated. Research papers do the reader no such favours. Being able to understand and use primary research is an essential tool in any scientific career. This book teaches these valuable skills simply and clearly, saving hours in the long run. Critical Reading explains how to: approach every paper methodically spot work aimed to support a pet theory gain confidence in questioning what you read be alert to bias use abstracts intelligently identify suspect experimental methods assess quantitative methodology interpret results with confidence draw inferences from published work. Using extracts from published Papers in Focus, this book imparts valuable know-how to students and researchers from any biomedical or biological discipline. The text is easily read and understood and the use of key points, summaries and reference reinforces good technique.
