Also, polynomials of one variable are easy to graph, as they have smooth and continuous lines. Example: $x^4 - 2x^2 + x$. See how nice and smooth the curve is? You can also divide polynomials (but the result may not be a polynomial). Degree. The degree of a polynomial with only one variable is the largest exponent of that variable.

basic math and biology, as well as advanced topics like Organic Chemistry and Statistics. Whether you're studying sociology, differential equations or French II, these free CliffsNotes articles can help you when doing your homework, writing papers, or taking tests.

Study Guides | CliffsNotes
A polynomial in the form $a^3 + b^3$ is called a sum of cubes. A polynomial in the form $a^3 - b^3$ is called a difference of cubes. Both of these polynomials have similar factored patterns:
A sum of cubes: $a^3 + b^3 = (a + b)(a^2 - ab + b^2)$
A difference of cubes: $a^3 - b^3 = (a - b)(a^2 + ab + b^2)$
