What is Zend Engine? -> Welcome to davidtechtips.com

Zend Engine 1 is the internal engine used by PHP for the entire version 4 release line. It is no longer considered active, but the old ZE1 documentation is preserved here exactly as it was. add a note

PHP: Zend Engine 1 – Manual

Zend Engine is used internally by PHP as a compiler and runtime engine. PHP Scripts are loaded into memory and compiled into Zend opcodes. These opcodes are executed and the HTML generated is sent to the client.

Home – Zend Framework

The Zend Engine compiles PHP source code on-the-fly into an internal format that it can execute, thus it works as an interpreter. [192] [193] It is also the "reference implementation" of PHP, as PHP has no formal specification, and so the semantics of Zend PHP define the semantics of PHP.

PHP – Wikipedia

Zend Engine is an open source scripting engine which acts as an interpreter for the PHP programming language. This was initially developed by two students at the Technion – Israel Institute of Technology. Zend engine is a virtual machine or VM. As we know that a Virtual machine is nothing but software which simulates a physical computer.

PHP and Zend Engine Internals – Application Architecture -
